

## Short Communication

### Environmental *Legionellae* in Thailand

Somchai Bovornkitti, MD, Hon.MRCP, FRCP, FRACP, Hon.FACP

The Academy of Science, The Royal Society of Thailand

*Legionella pneumophila* sero group 1 is the most prevalent pathogenic microorganism that found in environmental sources in every region of Thailand. The existence in cooling towers (57 percent) is much higher than that found in other sources (21.8 per cent), especially in hot spring water.
